1. FEATURES

IR-40 non-contact infrared thermometer measures the infrared wavelength emitted from the target and converts it to standard current signal output (4~20mA) and RS-485 communication signal output.

It can measure from -20 °C to maximum 1000°C in the distance of 40:1 D:S (Distance to Spot). Emissivity is 0.10 ~ 0.99 adjustable. Two built-in laser pointers can aim at the target.

※ Applications:

Plastics, Fluids, Rubber, Coated components, Asphalt, Wood, Paper, Ceramics, Textiles, Glass, Food etc.

11. INSTALLATION

- Please make sure the target area is larger than the field of view.

The spot size is decided by the distance from the sensor to the target.
Please refer to the 'section 5. Optical field of view' and make sure your target area is larger than the field of view.

- Please locate the sensor vertical against the target.

It is the best for you to install the sensor vertical against the target area or object. If it is not available, the sensor should be more than 45° against the target area. Otherwise, it can affect the measuring accuracy.

- Please avoid the heat reflection from other high temperature materials

- Please avoid highlight.

- Please avoid electronic noise.

Please avoid the high frequency or high voltage area such as motor, pump, power line, and so on.

- Check sensor and wiring
